FOR IMMEDIATE RELEASE (TSX V Symbol: AUX) March 1, 2007

Update on Program in Mexico

Auramex Resource Corp. announces that two samples taken from a tailings dump at El Escobal assayed 3.54 grams gold/tonne and 3.17 grams gold/tonne. The assays were done by ALS Chemex in Vancouver using methods AA23 and ICP21. The volume of tailings is not precisely known, but a rough estimate is 15,000 to 20,000 tonnes. Further work is underway to determine the possibility of a small scale operation to recover the gold.

Drill Program

Core drilling is underway at location #6 of the planned 8 sites at El Escobal. The holes are testing for mineralization along 160 metres of strike northwest of the 100 metre strike interval drilled by Santa Cruz in 1996. Core samples from three holes have been sent to Acme Laboratory Ltd. in Vancouver for gold and silver assays. Assays will be released when received.

This release has been approved by the Company's qualified person, David St. Clair Dunn, P. Geo.
