FOR IMMEDIATE RELEASE (TSX V Symbol: AUX)

June 14, 2006

Company Acquires Additional Claims Near Stewart, BC

Auramex Resource Corp. (the "Company") reports that it has optioned an additional 3,150 hectares contiguous to the previously acquired land package from Rodney V. Kirkham, at a cost of \$2,000 and subject to required assessment work and subject to a 1% NSR. The Stewart project now consists of over 23,000 hectares of mineral claims in four main claim blocks. The largest claim block covers the confluence of the Bear River and American Creek, including the west flank of the Cambria Icefield and the Todd Icefield. The other three main claim blocks are on the east side of the Portland Canal around the mouth of the Georgie River, north of Tide Lake and northeast of Meziadan Lake.

The Company has planned an exploration program that consists of detailed prospecting along the edge of the icefields, re-examination and re-sampling of the 13 known showings on the properties and stream sediment sampling. A follow-up program will consist of trenching any showings of economic importance. A diamond drilling program will be planned for the more favourable showings. Approximately 70% of the initial program will be helicopter supported directly from Stewart, the remaining 30% will be truck and boat supported with fly camps where appropriate. Phase one is estimated to cost \$150,000 and is scheduled to begin June 26, 2006.

Two errors have been noted in the news release dated May 31, 2006 regarding the completion of the drill program at Magenta in Mexico. An assay reported as 0.32% copper over a two metre interval from the drill core in the second hole was from a surface sample, not the drill core. Also, the second hole was drilled 800 metres from the first hole, not 500 metres as was reported in that news release.

The technical information in this news release has been reviewed and verified by David St. Clair Dunn, P. Geo. a qualified person under National Instrument 43-101.
