FOR IMMEDIATE RELEASE (TSX V Symbol: AUX) April 15, 2008

Drilling Underway on Magenta Project Underground Sampling Ongoing

Auramex Resource Corp. is pleased to announce that drilling has resumed on the company's Magenta Property, located 20 kilometres north of Culiacan, the capital of the State of Sinaloa, Mexico. This phase of drilling will consist of a 1,000 metre contract.

Drilling commenced April 13th on the El Fierro showing. One hundred fifty metres will be drilled in two holes to test the down dip extension of a surface showing that returned assays of 2.4% nickel, 0.91% cobalt and 1.08 g/t gold from one 1.5 metre chip sample.

The remaining 850 metres will be drilled in seven or eight holes at El Escobal gold mine. This drilling is designed to extend the high grade mineralization intersected in the 2007 program, 8.1 metres assaying 34.1 g/t gold, and to test other areas close to the historic workings.

Underground rehabilitation of the Level 2 has been completed sufficiently to allow access for chip sampling. Over 100 one to two metre chip samples have been taken of all exposed rock faces. Fifty-five assays have been returned of which 11 assayed greater than one g/t gold with three of these assaying greater than 10 g/t gold.

Assays are being carried out at Mineraleslab, S.A. de C.V. an ISO 9001 registered laboratory associated with Act Labs, based in Quebec. Mineraleslab is presently providing a three to seven day turnaround for gold and silver fire assays.

The technical information in this document has been reviewed and verified by David St. Clair Dunn, P.Geo., a qualified person under National Instrument 43-101.
